Muhammad Ardian Maulana

Bandung, West Java | ardianmaulana92251@gmail.com | +62 82130136096 | LinkedIn (Hyperlink) | Portofolio Link

SUMMARY

Ardian is an analytical and technology-driven Informatics student with hands-on experience in backend development, system analysis, and software documentation. Proficient in Go, Java, Node.js, SQL, REST APIs, database integration, authentication, and CRUD-based application development. Experienced in building and maintaining web applications, troubleshooting technical issues, and translating requirements into functional solutions. Ardian is highly interested in Backend Engineering, Cloud Computing, DevOps, and AI, with a strong focus on developing scalable, reliable, and efficient systems.

EDUCATION

University Name | *Bachelor of Informatics* **Bandung, West Java | 2024 – 2028 (Expected)**

- Cumulative GPA: 3.68/4.00

Related Courses

Web Development, Data Structures and Algorithms, Database Systems, And Object-Oriented Programming.

INTERNSHIP / PROFESSIONAL EXPERIENCE

CV. MULYA KREATIF CIPTA **Jun 2026 – Aug 2026**

- Developed and maintained web-based attendance systems for *Creativemu and Alfabank*, featuring GPS-based employee check-in/check-out, photo verification, admin monitoring dashboards, leave management, attendance history, and automated reporting.
- Contributed to both *frontend and backend development*, including database integration, API implementation, debugging, feature enhancement, and system optimization to improve usability and reliability.
- Collaborated in translating operational requirements into functional system features and supported testing, troubleshooting, and deployment processes throughout the development cycle.

TRAINING & CERTIFICATION

Digital Learning - Multimedia Application, Big Data and Cybersecurity Laboratory **Jun 2025 – Jul 2025**

Learn about Multimedia Application, Big Data, Cybersecurity (Linux fundamentals), Data Processing, Data Analysis, Data Visualization, Machine Learning, Web Technology and practical digital technology implementation.

Additional Online Courses

- Intro to Software Engineering – RevoU
- JavaScript Introduction - MySkill
- PHP Laravel: Build Amazing Streaming Service – Udemy
- Cloud Practitioner Essentials AWS - Dicoding Indonesia

ORGANIZATIONAL EXPERIENCE

Backend Developer - Central Computer Improvement **Jan 2026 – Now**

- Built and managed backend features such as user login, product management, cart system, transaction flow, and data processing using Java, Go, Node.js, PostgreSQL, MySQL, And Next.js.
- Implemented structured data management, API routing, error handling, and database backup utilities to support scalable and maintainable application systems.

System Analyst - Advance Software Engineering Laboratory **Jul 2025 – Sep 2025**

- Handled software analysis documentation, including Software Requirement Specification (SRS), Software Design Document (SDD), and Unified Modelling Language (UML) diagrams.
- Analyzed user requirements and translated them into clear system features, workflows, and development direction.
- Collaborated with the team to define project scope, application structure, and core functionality before implementation

Programming - Multimedia Laboratory **Nov 2024 – Dec 2025**

- Worked with Python and Roboflow to support dataset preparation, annotation, model training workflow, and object detection implementation.
- Developed the ETL to Detect Wrong Way project, a computer vision-based system designed to detect vehicles moving in the wrong direction using image/video processing and machine learning concepts.

PROJECTS & PORTOFOLIO

Web Developer – Creativemu & Alfabank Attendance System
Developed web-based attendance systems with GPS check-in/out, admin dashboards, leave management, reporting, database integration, and feature improvements.

Fullstack Development – GreenMarket Marketplace Web Application
Built an eco-friendly marketplace application with authentication, product management, CRUD operations, cart features, database integration, and transaction flow.

Computer Vision – E Tilang: Detect Wrong Way using Python and Roboflow
Developed a vehicle wrong-way detection system using Python and Roboflow, covering dataset preparation, object detection, and image/video analysis.

COMITEE EXPERIENCE

Informatics Student Association, Telkom University
Staff of Publication and Documentation — PPUH'24 **Nov 2024 – Feb 2025**

- Managed publication and documentation activities for PPUH'24, including capturing event moments, organizing visual materials, and supporting event promotion.
- Created and documented photo/video content to support organizational branding and activity reports.

SKILLS & INTERESTS

Database, Programming Languages & Software Tools: HTML, CSS, JavaScript, TypeScript, Python, Java, Go, SQL, MySQL, PostgreSQL, Node.js, React, Next.js, Express.js, Prisma and GitHub
Soft Skills: Critical Thinking, Communication, Teamwork, Problem Solving, Leadership, Management, Creative and Innovative
Interest: Full-Stack Development, AI Engineering, Cybersecurity, and DevOps
