SUMMARY

Analytical and technology-driven Informatics student with experience in backend development, system analysis, and software project documentation. Skilled in Go, Java, Node.js, SQL, and database integration, with a strong understanding of API logic, CRUD flow, authentication concepts, and system design. Experienced in building backend-related projects, analyzing user requirements, creating SRS, SDD, and UML documentation, and developing structured solutions that support scalable and maintainable application systems.

EDUCATION

University Name | *Bachelor of Informatics*

Bandung, West Java | 2024 – 2028 (Expected)

- Cumulative GPA: 3.60/4.00

Additional Courses

Web Development, Data Structures and Algorithms, Database Systems, Object-Oriented Programming, Computer Networks, Operating Systems, Software Analysis and Design, Python Programming, Golang Programming, Artificial Intelligence, and Machine Learning Fundamentals.

TRAINING & CERTIFICATION

Digital Learning - Multimedia Application, Big Data and Cybersecurity Laboratory

Jun 2021 – Jul 2021

Learn about Multimedia Application, Big Data, Cybersecurity (Linux fundamentals), Data Processing, Data Analysis, Data Visualization, Machine Learning, Web Technology and practical digital technology implementation.

Advance Group – Multimedia Laboratory

Des 2024 – Jan 2025

Learn about the development of an (E-Tilang project) as a digital solution for traffic violation management, focusing on data processing, machine learning implementation (Python Programming, Roboflow), project documentation, and presentation, teamwork, and communication skills.

Additional Online Courses

- Intro to Software Engineering – RevoU
- JavaScript Introduction - MySkill
- PHP Laravel: Build Amazing Streaming Service – Udemy
- Cloud Practitioner Essentials AWS - Dicoding Indonesia

PROFESSIONAL EXPERIENCE

Backend Developer - Central Computer Improvement

Jan 2026 – Now

- Built and managed backend features such as user login, product management, cart system, transaction flow, and data processing using Java, Go, Node.js, PostgreSQL, MySQL, And Next.js.
- Implemented structured data management, API routing, error handling, and database backup utilities to support scalable and maintainable application systems.
- Developed backend logic for web-based applications, including API flow and CRUD operations

AI Engineer - Big Data Laboratory

Nov 2025 – Now

- Built and managed data processing logic to support AI-based and data-driven application development.
- Supported AI and machine learning workflows through data collection, preprocessing, and analysis.
- Explored big data concepts, database systems, and AI implementation for real-world problem solving.

System Analyst - Advance Software Engineering Laboratory

Jul 2025 – Sep 2025

- Managed the EchoMarket Project, a digital marketplace platform for buying and selling unused or second-hand items
- Handled software analysis documentation, including Software Requirement Specification (SRS), Software Design Document (SDD), and Unified Modelling Language (UML) diagrams.
- Analyzed user requirements and translated them into clear system features, workflows, and development direction.
- Collaborated with the team to define project scope, application structure, and core functionality before implementation

Programming - Multimedia Laboratory

Nov 2024 – Dec 2025

- Worked with Python and Roboflow to support dataset preparation, annotation, model training workflow, and object detection implementation.
- Developed the ETL to Detect Wrong Way project, a computer vision-based system designed to detect vehicles moving in the wrong direction using image/video processing and machine learning concepts.

PROJECTS & PORTOFOLIO

Fullstack Development – GreenMarket Marketplace Web Application

Developed a marketplace web application focused on buying and selling products with an eco-friendly concept. Handled backend functionality including API logic, CRUD flow, user authentication concept, product management, cart system, database integration, and transaction-related data flow.

Computer Vision – E Tilang: Detect Wrong Way using Python and Roboflow

Developed a computer vision project for detecting vehicles moving in the wrong direction using Python and Roboflow, including dataset preparation, object detection workflow, and image/video-based analysis.

ORGANIZATIONAL EXPERIENCE

Informatics Student Association, Telkom University

Staff of Publication and Documentation — PPUH'24

Nov 2024 – Feb 2025

- Managed publication and documentation activities for PPUH'24, including capturing event moments, organizing visual materials, and supporting event promotion.
- Created and documented photo/video content to support organizational branding and activity reports.

SKILLS & INTERESTS

Database, Programming Languages & Software Tools: HTML, CSS, JavaScript, TypeScript, Python, Java, Go, SQL, MySQL, PostgreSQL, Node.js, React, Next.js, Express.js, Prisma and GitHub

Soft Skills: Critical Thinking, Communication, Teamwork, Problem Solving, Leadership, Management, Creative and Innovative

Interest: Fullstack, AI Engineer, Cybersecurity, Computer Vision, Data Science, and Database Management
